

Sight Words Slime

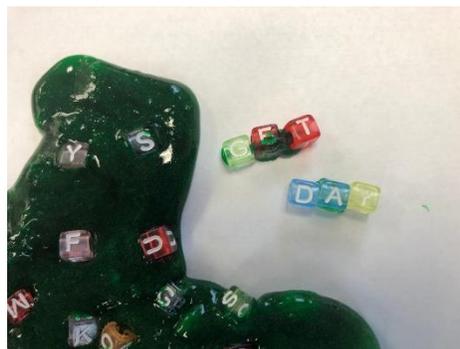

Slime is an interesting **mixture** of **materials** that, when blended, makes a super thick liquid that sticks together. The slime turns out well if you mix each of the parts in the correct order.

In a similar way, **words** are an interesting mix of letters that, when stuck together, can make sense and have meaning. You just have to put them together in the correct order.

In the Sight Words Slime STEM Challenge, your first task is to make a super cool batch of slime and then test the attributes of the slime. Make sure to mix each material that you add in the right order. After making your slime, you should observe it and test its properties. You should stretch your slime, roll your slime, and bounce your slime. After testing it, list at least 3 words that describe your slime.

Your second task starts by adding some letters to your slime. Poke each letter gently into the slime so that the letter faces up. The letters you get will depend on the sight words that you have been working on in class. Your challenge is to find the letters in your slime and put them together to make each word on the list. Remember, when letters are put in the correct order, they can make words that make sense and have meaning.

Good luck with this sticky, gooey, stem challenge.
